PROFESSIONAL SUMMARY

Fullstack Developer with 1 years of hands-on experience building and shipping production web applications — from RESTful APIs and database-driven backends to responsive SPAs. Delivered 3 live client products at Power 5 Technology within Agile team, delivering fullstack features across legal, financial, and e-learning domains. Fast learner with a strong sense of ownership, comfortable working across the full stack and integrating third-party services and AI tools into real products.

CORE SKILLS

- **Programming:** JavaScript, Python, Java
- **Frontend:** ReactJS, Vite, Bootstrap, SPA architecture, OAuth 2.0 (Google Sign-in)
- **Backend:** Node.js, Express.js, RESTful APIs, JWT, Java Spring Boot
- **Database:** PostgreSQL, SQLite, schema design, query optimization, vector database
- **Cloud & DevOps:** AWS S3, EC2, Linux, Git, GitHub Actions CI/CD, Vercel
- **AI & Tools:** Ollama (local LLM), prompt engineering, Telegram Bot API, Google Sheets API
- **Languages:** English (B2 CEFR)

WORK EXPERIENCE

Power 5 Technology Company Ltd Ho Chi Minh City | March 2025 – November 2025
Frontend & Backend Developer

- Built and deployed 3 production web applications serving real end users across legal, financial, and e-learning domains using React + Vite + Bootstrap and Node.js + Express.js.
- Designed and implemented multiple RESTful APIs for content management, form handling, and third-party data integration; validated all endpoints with Postman.
- Implemented secure authentication with JWT access tokens and bcrypt password hashing and Google OAuth 2.0 across multiple products.
- Investigated slow PostgreSQL/SQLite queries and improved average response time to ~1s through query refinement and indexing adjustments.
- Collaborated in an Agile team environment with sprint planning, task tracking, and cross-functional debugging sessions.

Justivalaw.com — Law Firm Website

- Built a responsive multilingual SPA (Vietnamese/English) with dynamic routing and SEO-oriented page structures for a law firm platform.
- Automated client inquiry notifications using Telegram Bot API and Google Sheets webhooks, enabling near real-time lead delivery to staff.
- Developed mobile-responsive UI components and reusable frontend modules using React + Vite + Bootstrap.

gocnhinhitruong.com — Financial & Legal News Platform

- Developed a scheduled Python crawler pipeline aggregating financial and legal news from 3 external sources every 8 hours.
- Implemented duplicate filtering and PostgreSQL persistence for automated content ingestion workflows.
- Integrated external financial APIs for real-time price feeds and structured backend modules for long-term maintainability.
- Processed and stored multiple daily news records through automated cron-based crawling workflows.

Ebook Platform — E-learning Marketplace

- Implemented Google OAuth 2.0 authentication and integrated VNPAY sandbox payment flows for end-to-end checkout testing.
- Designed AWS S3-based cloud asset storage and synchronization workflows for ebook management features.
- Built an admin dashboard for managing ebooks, users, and payment records within a centralized interface.

SELECTED PROJECTS

AI Task Manager (Node.js, ReactJS, Ollama) github.com/DucHuy2701/task-manager | Feb 2026 – Present

Fullstack Developer

- Built an AI-assisted task management application using locally hosted Ollama LLMs for priority ranking and scheduling suggestions.
- Designed prompt workflows for task classification and context-aware scheduling without relying on external AI APIs.
- Implemented session-aware AI interactions with local inference response times averaging 8–20 seconds.

FinEmo Coach (Node.js, ReactJS, Ollama) github.com/DucHuy2701/FinEmo_Coach | Feb 2026 – Present

Fullstack Developer

- Developed an emotion-aware personal finance assistant using Ollama LLMs and prompt branching based on 5+ emotional states.
- Implemented session-based conversational memory to generate more context-aware financial guidance.

E-commerce Platform (Java Spring Boot, MySQL)

github.com/DucHuy2701/JavaSpringBoot | Sep – Dec 2024

Fullstack Developer

- Built a full-stack e-commerce system with MVC architecture using Java Spring Boot and MySQL.
- Designed REST APIs for product, order, and user management with role-based access control.

EDUCATION

Industrial University of Ho Chi Minh City

Ho Chi Minh City | 2017 – 2025

Bachelor of Engineering in Information Technology

Includes 2 years of mandatory military service (completed).
